COMPOSITION

- Specific additive dissolved in hydrocarbon-based solvents.
- Designed to clean carburettor injection systems.

PROPERTIES

- Cleans lubricates and protects glass fuel injection systems.
- Fuel additive that eliminates deposits at the ends of injector valve seats.
- Improves start-ups.
- Reduces combustion residue and fumes caused by deposits.
- Improves power and acceleration.
- Prevents corrosion.
- Improves fuel efficiency.

INSTRUCTIONS

- Compatible with all gas fuel injection engines.
- Empty a full flask into your vehicle’s tank and then add at least 20 litres of petrol.
- Ideally, use one measure (250 ml) for every 150 litres of fuel or at least, once a month, in normal conditions.
- For remedial action, use one measure (250ml) for every 40 litres of fuel, for 1500 km.
